

Smoothest for family sailing on river, lake or open water.

Smoothest to trailer or carry on your cartop — fits in station wagons too.

Smoothest to handle by young or young at heart.

Smoothest to race — It's always out front.

Smoothest to maintain — All reinforced fiberglass construction with Dacron sails and corrosion proof hardware.

Smoothest to buy — Low initial price is for the complete boat ready to sail and enjoy.

Start of 2nd Race — 1965 Nationals

**THE FIBERGLASS**

**Starfish**

**. . . SMOOTHEST SAILBOAT  
IN ITS CLASS.**

STARFISH sailing provides fun and thrills for the whole family. It is so easy to handle that an eight year old can easily become the expert corinthian. The watertight hull is designed and stressed to be immune to damage under all normal sailing conditions. It just can't sink.

The STARFISH planing hull will lift on to a fast and smooth plane in a soft ten knot breeze.

STARFISH owners are part of a national association that includes fleets from California to Washington, D. C., also in Florida, the Midwest and on the Gulf Coast.

Demonstrated and Sold by

**SAFEST, FASTEST and SMOOTHEST** hull provides years of happy sailing on the most beautiful boardboat made.

**DECK** design features include the molded in splash rail for added strength and beauty, and a non-skid cockpit deck to insure that the sailor and his boat stay with each other.

**HULL** features found in STARFISH include a completely watertight unit that cannot sink and contains enough emergency flotation foam to float over 200 pounds. The entire hull of the boat is supported by longitudinal braces that add strength and rigidity for trailering and guarantee maximum stability of the design.

STARFISH sails are made by real craftsmen. Every sail is cut to exact class specifications from the finest Dacron sailcloth available. Sail colors are non-fading and can be selected in any combination to match your particular hull and deck colors.

**RUNNING** rigging is all Dacron yacht braid that will not rot, break or snag under normal use. It is easy on the hands, and will last for the life of the boat.

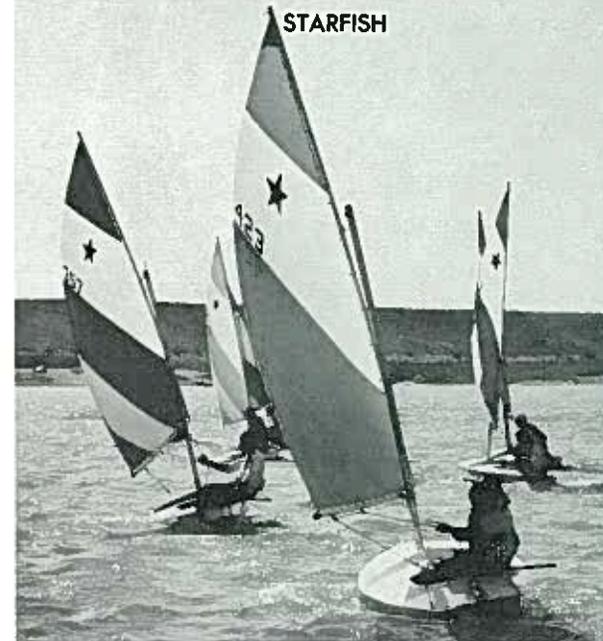

**MAST** and booms are made of special strength anodized aluminum. STARFISH sailboats have actually been sailed in winds that were gusting to 50 mph with no failure or damage to any part of the spars, rigging, hull or sail.

**DAGGERBOARD** and rudder blades are made of the finest Mahogany that is beautifully finished in its natural warm color and protected by many coats of heavy duty marine varnish.
